

**Elyctis expands its manufacturing capacity in France to satisfy growing demand for Identity Document readers**

**Facing a fast growth and a sustained demand for its products, Elyctis, an international leader in identity document readers, is expanding its production capacity, now occupying a new 1200 sq. meters building, in Pertuis, France.**

**PERTUIS, FRANCE, September 25, 2017** – Elyctis, an expert in the development of ID card and ePassport readers is experiencing the doubling of its sales in 2017, leading the company to need more manufacturing space and to expand its workforce. Elyctis has hired new staff and it now employs over 20 people in its premises in Pertuis, France. This location, at the heart of the Provence Silicon Valley, is ideal to foster collaboration with the local industrial base.

To cope with its growth, Elyctis has completed its move to a new building in Pertuis, France, where the company manages all steps in its production process. All functions: R&D, integration, qualification, production, quality assurance and maintenance are completed by a single organization in a single building. Manufacturing in France guarantees the highest level of quality and flexibility in order to always adapt to customer demand.

In addition, as developing ID document reader applications requires a high level of confidence from governments, the fact that Elyctis masters the whole manufacturing process and runs it in France guarantees the highest level of security and confidentiality.

Elyctis new 1200 sq. meters building includes a clean room, which ensures all scanners that are a fundamental part of Elyctis eID readers, are individually checked and calibrated. This way, Elyctis reaches the highest quality level in terms of image reading and analysis, in order to guarantee a smooth operation of the readers on the field.

Elyctis expansion into its new building has been made possible thanks to the support of the Pertuis City and the Urban Community of Marseille Provence Métropole. Roger Pellenc, mayor of Pertuis, 1<sup>st</sup> vice-president of Pays d'Aix in charge of economic development and urban community councilor, declares: "In the context of our economic development program, we are very happy Elyctis is expanding while remaining headquartered in Pertuis. Having high tech companies thriving in our territory brings dynamism while increasing opportunities for all local residents."

Alexandre Joly, Elyctis CEO, adds: "The installation in our new building and the setup of our clean room allows us to ensure we always bring the highest performance to our customers for government and non-government applications."

In addition, Elyctis will be present at Smart Security Week conference and trade show, in Marseille, France, from September 25<sup>th</sup> to September 27<sup>th</sup> 2017.

## **About Elyctis**

Created in 2008, Elyctis specializes in the development, industrialization, production and marketing of fixed and mobile readers dedicated to Secure Identity Documents (e-passport, e-ID card, e-driver license,...). The company, which now employs 20 people, has a longstanding expertise in eID projects, as well as hardware and software developments. Elyctis sells its products through its network of distributors and systems integrators, to whom it provides development kits to facilitate the use of its readers. Elyctis is headquartered in Pertuis, France, and has a sales office in Hong Kong.

Alexandre Joly, Elyctis founder and CEO is a laureate of Reseau Entreprendre since 2011, and a laureate of the Reseau Entreprendre Ambition program in 2016.
